Installation Guide - GreaseShield®1000 AST

- 1 GS1000 AST Unit: Ensure that there is sufficient clearance above and to the right of the unit for servicing purposes (5.9"/150mm minimum).
- 2 Inlet Pipe 1¼"/34mm: To be piped with a sufficient fall of no less than 1 in 40. A 1¼"/32mm to 1½"/40mm FlexiPlumb adaptor may be required.
- 3 Outlet Pipe 2"/54mm: To be piped with a sufficient fall of no less than 1 in 40.
- 4 Sampling Point: Connected to the outlet of the unit; it is essential in the analysis of effluent leaving the unit.
- 5 Running Trap: The outlet of unit must be fitted with a running trap to reduce foul smells.
- 6 FOG Container: Ensure that the container is not restricted or blocked for daily maintenance.
- Solids Container: Ensure that the container is not restricted or blocked for daily maintenance.
- BHOT Water Solenoid Valve: Hot water must be connected to the unit using the ¾" BSP (F/F) Red PVC Hose provided, water supply must not exceed 3 bar pressure and 60°C/140°F. In the case of high pressure a pressure reducing valve must be used. Mains water connections must be made via a WRAS approved isolation valve which follows a WRAS approved double check valve.
- Power Lead: The unit must be plugged into a 13 amp rated IP56 socket located below counter level.
- interconnecting Pipework: All pipework must be clipped and properly supported.
- Stainless Steel Hygiene Stand (Optional Extra): GS1000 AST unit should be installed on a Stainless Steel Hygiene stand. It can be adjusted up to 2"/50mm in height to allow the unit to be levelled on uneven surfaces and provide access for cleaning.

Installation Guide - GreaseShield®1000 AST

- Make sure the unit is installed on level ground or adjust the stand feet to ensure the unit is level.
- Have a hot water connection available to connect to the unit, if one is not available the unit must be equipped with a Genie H2O to give hot water on demand. Water connection must be made via a WRAS approved isolation valve (A) and double check valve (B).
- Have an IP56 rated socket below counter level available to the unit to plug into. If a genie H2O is required ensure an additional power supply (preferably a fuse spur) is available.
- Ensure all pipe work into and out of the unit has at least a 1 in 40 fall (downwards angle of 1.5°).
- Clean the Solids Container and FOG container daily.
- An Air Admittance Valve D must be installed after the running trap so a siphon doesn't occur.
- X DON'T
 - Place the unit in passageways where it can be a hazard or be damaged.
 - Open the unit or insert hands into any part of the unit; moving parts can cause injury.
 - Stand or place heavy objects on top of the unit.
- **DON'T** Dismantle the unit in any way, only qualified service staff are to access the inside of the unit.
