Operations Guide - GreaseShield®1000 AST-PF

Anti-Flood Sensor If the effluent level inside the GreaseShield® becomes to high, a pressure sensor is triggered activating a pump. This pump extracts Grey Water from the bottom of the tank and sent directly to the drain via the normal outlet.

FOG Removal

A number of co-operating baffles combined the the reverse flow design of the tank, utilises the difference density of grey water and FOGs to separate the effluent. FOGs are directed towards a large, oleophilic (attracts FOGS) and hydrophobic (repels water), FOG Removal Roller. This submerged Roller removes the FOGs from the effluent. A silicone Wiper Blade, with anti-static properties, scrapes the FOGs from the roller and deposits them into the FOG Container.
